

SUMMARY:

- I've created a backup service for PostgreSQL operators;
- Implement TLS feature to components of operator;
- Developed an order exchange system from scratch, using provided and own APIs;
- I worked with highload systems.

Core expertise:

Golang, Kubernetes, PostgreSQL, gRPC, Rest-API, AWS, Docker.

EXPERIENCE:

2024.08 – now – Software engineer, Netcracker

Achievements:

- Implement TLS feature to components of PostgreSQL cluster, increasing the security of data transfer between components;
- Design and implement service component to operator: monitoring agent and backuper;
- Contributed to the open source preparation of <https://github.com/Netcracker/pgskipper-operator>: removing internal dependencies, refactoring the code, and organizing the documentation.

Technical stack:

Golang, Kubernetes, PostgreSQL, gitlab, rest-API, AWS.

2021.10 – 2024.07 – Backend developer, Albatros

Achievements:

- Developed an order exchange system from scratch, using provided and own APIs;
- Worked with highload systems;
- Maintained personal account functionality of the website;
- Rewrote interaction with Google Maps APIs (G.Maps direction API, Places API).

Technical stack:

Golang, 1c, SQL, gitlab, docker, rest-API, open API.

2018.08 – 2021.10 – 1C-developer, Vybor-S

Achievements:

- Aggregated accounting reports from different databases;
- Integrated third-party modules (alcohol) to unify separate databases for improved workflow.

Technical stack:

1c, SQL

2013.06 – 2018.08 – 1C-developer, Pilot

Achievements:

- Migrated database to a new version and developed customized interfaces for employees (ARM);
- Created processing for exporting goods in Yandex Market Language format for Yandex Market;
- Integrated store database with services for selecting parts;
- Implemented a system for managing service requests (requests, implementation, distribution, tracking).

Technical stack:

1c, SQL, rest-API

2012.05 – 2013.06 – 1C-developer, Construction house "Petrovich"

Achievements:

- Provided support for over 10 stores with more than 100,000 items in each.

Technical stack:

1c, SQL

2007.03 – 2012.04 – Lead developer, Cinimex

Achievements:

- Participated in the integration of Russian and Finnish financial accounting systems (ASW and 1C);
- Executed the migration of the enterprise from 1C 7.7 to 8.2;
- Enhanced a project on RPG-IV to adapt it to new document formats.

Technical stack:

1c, SQL, RPG-IV
